

Hedging Policy

CTRL Investments Limited

Introduction

You deal with CTRL Investments Ltd (**CTRL, we, us or our**) as a counterparty to every position you enter into onto our platform. CTRL is a New Zealand incorporated company (Company No. 2446590, NZBN 9429031595070) and a registered foreign company in Australia (ARBN 152 535 085). CTRL is licensed and regulated by the New Zealand Financial Markets Authority (FSPR No. FSP197465) and the Australian Securities and Investments Commission (AFSL No. 414198). You will have exposure to us in relation to each position if we are unable to meet our obligations.

This policy explains the arrangements we have in place to manage our risk exposure to client positions.

We manage our exposure to credit, liquidity and market risks using a range of risk mitigation tools, such as our hedging counterparty arrangements, and internal risk management processes.

Our hedging counterparties

CTRL maintains relationship with several hedging counterparties. The primary one being Mkhonto Financial Services (Pty) Ltd, registered and licensed in South Africa.

We hedge all positions that our clients enter into through our CFD products. Our hedging counterparties enter into back-to-back transactions (i.e. takes an equal and opposite reciprocal transaction) to your trades.

We have access to a panel of third-party liquidity providers and policies for assessing and monitoring counterparty risks.

We have processes through which we regularly monitor the financial standing of counterparties to ensure that the counterparty risk borne by us in connection with this hedging counterparty is commercially acceptable. For example, we assess the credit quality of counterparties at least annually, and more frequently if there is a significant change in market conditions or unfavourable circumstances.

If our hedging counterparty's liquidity and/or solvency deteriorates, we may reduce or cease our hedging activities with the specific provider.

We reserve the right to change the hedging counterparty or add other counterparties, where we consider it necessary to do so. Where there are any changes to our hedging counterparty, we will provide the changes by updating our Hedging Policy.

Any counterparty we use for hedging will be selected by us based on a risk assessment that takes into consideration a number of factors including:

- the financial performance of the counterparty based on financial statements and other available financial information;
- its credit rating, loan activities and investment risk appetite; and
- the strength of its financial and compliance (including risk management) resources.

Risk management processes

Our clients could still be exposed to the default risk of our hedge counterparties, where we are unable to withstand the losses arising from such events.

We seek to further mitigate this risk through other financial resources and processes we have in place, for example:

- Under CTRL's licensing obligations, CTRL is required to hold adequate financial resources and compensation arrangements to protect clients against losses resulting from our business activities, including our counterparty arrangements.
- To some extent, we also manage the counterparty risk to our clients through automated processes within our Trading Platforms which trigger automatic close out of open CFD positions in accordance with our Terms of Use.
- We also have a risk management framework and other relevant policies through which we seek to manage our operational risks.

However, we do not in any way guarantee that all counterparty risk to our clients are eliminated.
